

## Hackers Breached US Army Servers (89 comments)

timothy

**Hackers Breached US Army Servers:** An anonymous reader writes A Turkish hacking ring has broken into 2 sensitive US Army servers according to a new investigation uncovered by InformationWeek. The hackers who go by the name m0sted and are based in Turkey penetrated servers at the Armys McAlester Ammunition Plant in Oklahoma in January. Users attempting to access the site were redirected to a page featuring a climatechange protest. In Sept 2007 the hackers breached Army Corps of Engineers servers. That hack sent users to a page containing antiAmerican and antilsraeli rhetoric. The hackers used simple SQL Server injection techniques to gain access. Thats troubling because it shows a major Army security lapse and also the ability to bypass supposedly sophisticated Defense Department tools and procedures designed to prevent such breaches.

**Re:wood for the trees:** I have worked with the U.S. Army Network Engineers. I was appalled at their lack of knowledge and understanding of security.
